

Statistics, Evidence-based Medicine, and Clinical Trial Design - Core Therapeutic Module

Activity Overview

The purpose of this Core Therapeutic Module is to help participants prepare for a Board of Pharmacy Specialty (BPS) examination by providing a review of the topic, practice of required skills, and references to helpful study resources. To help you further prepare, this module includes a compilation of practice questions in the same format and rigor to help you prepare for the BPS Specialty Examination.

Learning Objectives

At the conclusion of this application-based educational activity, participants should be able to do the following:

- Determine quality of a study by examining study design, statistical analysis, quality of conclusions, and interpretation of graphs.
- Determine clinical and statistical significance.
- Determine if appropriate statistical tests have been used.
- Determine whether the study applies to a specified patient population.

The normal cost for this Core Therapeutic Module: \$75 member/\$100 non-member

****For Midyear Meeting registrants, the Core Therapeutic Module is included**
